-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Drawings***

1. Corrected Drawings were received on 15 March 2004.

### ***Specification***

2. The disclosure is objected to because of the following informalities: on page 4, line 28, "40" should be changed to "24".

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 6 – 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Freund et al. (US 6382850).

Freund et al. have a photographic processing system (see Figs. 1 and 10) comprising a conveying member (30) comprising an endless belt having a plurality of slots/openings (30'), the belt passes around a pair of rollers (100, 102); a vacuum chamber (33) draws and holds the photosensitive media (sheet 25) onto the conveying member (30); a processing solution is applied to the photosensitive media on the conveying member (30) by print head (36).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Freund et al. (US 6,382,850).

Freund et al. do not disclose whether the source for the vacuum is a pump. One of ordinary skill in the art at the time the invention was made would have recognized that a pump is the most common and effective source for obtaining a vacuum and would have been motivated to use a pump as the vacuum source.

***Allowable Subject Matter***

7. Claims 2 – 4 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not suggest or teach at least a wall separating the vacuum chamber into two sections and a baffle as claimed.

***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sanada et al. (US 6,241,401) have a photographic processing

system having a processing solution applicator and a vacuum chamber, but do not have a conveying member as claimed.
